

Organic Big Daddy COCO GRO BAG

As easy as...

- 1** Lay the Big Daddy Coco Gro Bag on a flat surface or in a flat tray.
Remove top label and open up the bag to add water. Add 1 gallon of water. The expansion time will vary depending on water temp. Full expansion may take up to 1 hour.
- 2** Excess water can be drained by cutting or punching holes in the bottom of the bag. If desired, additional holes can be placed on the sides near the bottom for additional drainage and aeration.
- 3** Continue to add water as needed.
To optimize the nutrients, we recommend adding a complete fertilizer based upon your plant's preference (such as B-1 Plus, Fish Emulsion, or a liquid fertilizer with a NPK of 2-2-5, 2-8-4, 6-4-4, or 7-9-5). A drip system can be added to the Big Daddy for convenience.
