

# **Hydrofarm T5 Reflector Single Fixture Instructions**

1. Carefully remove components from box and protective foam and ensure that your Hydrofarm T5 Fixture box includes the following:
  - a. One T5 lamp fixture.
  - b. Two hook style hanging clips.
  - c. Two screw in style hanging clips, with hardware.
  - d. One T5 bulbs
2. Inspect the included components for any damage, missing parts, or other concerns. Contact your store in order to get a replacement or new part if required.
3. If there is a protective film on the reflector surfaces, be sure to remove it completely prior to installing the bulbs.
4. Before installing the T5 fluorescent tube, remove cardboard and inspect the socket end on the fixture to be sure it is ready to receive the pins on the tube ends. Gently align the pins vertically upon inserting in each socket and once all the way down, gently rotate to seat the pins into a horizontal orientation. You should feel a small bump upon proper location.
5. To hang fixtures using hooks, install the hook-style hanger clips onto fixture, and use eye-hook type wood or drywall screws (not included). Simply turn the screws clockwise into a suitable surface and hang light one end at a time by hooking clips over eye. To use screw in style clips, screw the clips into a suitable surface using the included hardware, and clip the fixture into place.
6. To adjust height, determine proper chain link and attach it to hanger clips.
7. Plug the grounded electrical cord (provided) into 120V, 60Hz outlet.
8. Do not use with dimmers.
